Novel isolated NOVX polypeptide, and encoded polynucleotide, useful for treating cardiomyopathy, artherosclerosis, and cancer.

Claim 1; Page 9; 180pp; English.

The present invention relates to a new NOVX polypeptide having a 900 (NOV1), 4349 (NOV2), 940 (NOV3), 798 (NOV4), 865 (NOV5), or 331 (NOV6) residue amino acid sequence, as given in the specification. The novel polypeptide, and its encoding polymucleotide, are used to treat cardiomyopathy, atherosclerosis, cancer or a disease related to cill signal processing and metabolic pathway modulation, in a human. Detecting the polypeptide or polymucleotide is useful for identifying cancerous tissue. The antibody can be used to treat diabetes or cancer. The host screening. The present amino acid sequence is that of the human UNC5-like protein NOV1 of the invention. This sequence is encoded by the human UNC5

The invention relates to an isolated cytoplasmic, nuclear, membrane common, or secreted polypeptide (NOVX, x= 1-14) their variants or mature bound, or secreted polypeptide (NOVX, x= 1-14) their variants or mature comprising the nucleic acid, a cell comprising the vector, an anti-convector comprising the nucleic acid and the NOVX antibody and modulators of NOVX. NOVX, the nucleic acid and the antibody are useful for treating or preventing a NOVX-associated antibody are useful for treating or preventing a NOVX-associated disorder, where the disorder is selected from cardiomyopathy.

CC disorder, where the disorder is selected from cardiomyopathy, can metabolic pathway modulation, metabolic disorders, obssity, concertassociated cachexia, cancer, infectious disease, anorexia, cancer-associated cachexia, cancer, confimume disorders, haematopoletic disorders, and the various immune disorders metabolic disorders associated with obesity, the dyslipidaemias, metabolic disorders associated with obesity, the chisasses, bacterial, fungal, protecal and viral infections, pain, bullmia, asthma, hypertension, urinary retention, osteoporosis, Cdiseases, multiple sclerosis, Albright Hereditary Osteoporosis, Conservation, urinary retention, osteoporosis, Conservation, uninary retention, osteo

This invention relates to the DNA and protein sequences of a novel

purified human netrin binding membrane receptor, UNC5H-1. The DNA

sequence of the invention is useful as a probe for detecting a nucleic

acid encoding the UNC5H-1 protein in a biological sample. The sequences

of the invention are useful to screen for agents which decrease the

cof the invention are useful to screen for agents which decrease the

correction agents which regulate (modulate) the activity of the protein of

the invention. A pharmaceutical composition containing the protein of

the invention or a reagent that modulates the activity of the UNC5H-1 protein

compared to a central nervous system (CNS) disorders (e.g., Parkinson's

disease, multiple salerosis, stroke and Alzheimer's disease). Fusion

proteins comprising the UNC5H-1 protein are useful for generating

antibodies and for in various assay systems, and the protein can be used

contained the invention is useful for detecting a coding sequence for the UNC5H
contained the invention is useful for detecting a coding sequence for the UNC5H
contained the invention binding

contained the invention of the invention

Novel human netrin binding membrane receptor polypeptide and polynucleotides for identifying modulating agents useful in treating diseases e.g. Parkinson's disease, multiple sclerosis, stroke, Alzheimer's disease.

UNC5H-1 and UNC5H-2 (see AAW78900) are rat homologues of Caenorhabditis clegans UNC-5 protein. Their amino acid sequences were deduced from clear isolated unc5h cDNA clones (see AAV52940 and AAV52945) isolated from an isolated uncbh cDNA library. The predicted proteins show similarity with UNC-CC isobsses 2 predicted ig-like domains and 2 predicted thrombospondin type-1 repeats, a predicted membrane spanning region, and a large contractellular domain. They are predicted to be involved in cell migration and axon guidance, and are characterised as receptor proteins for netrins. Human UNC5H-1 (see AAW78899) and UNC5H-2 (see AAW78901) proteins contransfected host cells. The invention also provides unc-5 from transfected host cells. The invention also provides unc-5 hybridisation probes and primers, vertebrate UNC-5-specific binding compositions in diagnosis (e.g. genetic hybridisation screens for vertebrate unc-5 gene expression) and in the biopharmaccutical industry composition expression and in the biopharmaccutical industry correcting chemical libraries for modulating cell guidance, reagents for modulating cell guidance, reagents for gene (e.g. agents, etc.).

diagnoshing and/or developing treatments for schizophrenia using chronic animal models. The polymucleotides and their encoded polypeptides are used for identification of compounds which modulate the expression of YSG molecules, leading to the manufacture of schizophrenia medicaments. The sequences can also be used for testing candidate compounds for any effect on the polypeptides. Anti-schizophrenic effects of a compound can be determined by measuring local cerebral glucose utilisation (LCGU) or comparing its expression level with that of a control group. The comparing its expression level with that of a control group. The sequences are useful in the identification of genes associated with collipse and in the development of an antibody. The sequences of the invention include phosphodiesterase 1-alpha, calcium-independent caepptors (CIRL)-1,2&3, epithelial discoidin domain receptor (CIRL)-1,2&3, epithelial discoidin domain treceptor (TRE), netrin receptor (UNCSHI), synapsins lA and AB and terrin receptor (TRF) alpha. This sequence represents rat netrin

This invention relates to the DNA and protein sequences of a novel

cutified human netrin binding membrane receptor, UNCSH-1. The DNA

cutified human netrin binding membrane receptor, UNCSH-1. The DNA

sequence of the invention is useful as a probe for detecting a nucleic

acid encoding the UNCSH-1 protein in a biological sample. The sequences

of the invention are useful to screen for agents which decrease the

cutivity of the UNCSH-1 protein. The sequences are also useful for

screening agents which regulate (modulate) the activity of the protein of

the invention. A pharmaceutical composition containing the protein of the

cutivity of the UNCSH-1 protein

can be useful for treating a UNCSH-1 dysfunction related disease such as

cancer or a central nervous system (CNS) disorders (e.g., Parkinson's

cancer or a central nervous system (CNS) disorders (e.g., Parkinson's

disease, multiple sclerosis, stroke and Alzheimer's disease). Fusion

cropic antibodies and for in various assay systems, and the protein can be used

as a bait protein in a two-hybrid assay or three-hybrid assay. The method

cof the invention is useful for detecting a coding sequence for the UNCSH-1

cof the invention is useful for detecting a coding sequence for the UNCSH-1

therapy;

```
The invention relates to polymucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell prollferation or cell forbulations. The production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, activity, tissue growth factor activity, immunoomodulatory activity and activity, immunoomodulatory activity and activity in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                    Nucleic acids encoding polypeptides with cytokine-like activities, useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to twelve human receptors cDNA sequences referred to as REPTR-1 to REPTR-12), and the proteins encoded thereby. The proteins of the invention may have antinflammatory, cytostatic, proteins of the invention may have antinflammatory, cytostatic, compared immunosuppressive, antiviral, anti-HIV, antiarthritic, muscular active general, anticonvulsant, nootropic, neuroprotective, antiallergic general, anticonvulsant, nootropic, neuroprotective, antiallergic activities. The sequences of the invention may be used to produce REPTR activities or that antibodies. These molecules and the REPTR polynucleotides and polypeptides of the invention are useful in the diagnosis, treatment and prevention of gastrointestinal (e.g. gastriits, oesophageal carcinoma, Crohn's disease, irritable bowel syndrome, ulcerative colitis), endocrine (e.g. hypothalamus disorder, Kallam's disease), autoimmune/ inflammatory (e.g. acquired immune deficiency syndrome (AIDS), rheumatoid arthritis, diabetes mellitus, multiple sclerosis, systemic lupus erythematosus), cell proliferative (e.g. cancer), cellergis, cascoarthritis, diabetes mellitus, multiple sclerosis, systemic lupus erythematosus), cell proliferative (e.g. cancer), cellergiemer's disease, Huntington's disease) and creproductive (e.g. infertility, endometriosis) disorders. Numerous other examples of each disorder are given in the specification. The present cerepresents the human REPTRI protein sequence of the invention
                                                                                                                                                                                      AREPTR; human; antiinflammatory; cytostatic; immunosuppressive; antiviral; antial-HIV; antiarthritic; anticonvulsant; nootropic; neuroprotective; antiallergic; antibody; immunogen; endometriosis; gastrointestinal disorder; gastriitis; oesophageal carcinoma; crohn's disease; irritable bowel syndrome; ulcerative colitis; endocrine disorder; hypothalamus disorder; Kallman's disease; autoimmune disease; inflammatory disease; infertility; receptor; acquired immune deficiency syndrome; AIDS; rheumatoid arthritis; allergy; osteoarthritis; diabetes mellitus; multiple sclerosis; systemic lupus erythematosus; cell proliferative disorder; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Tang YT;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            UNC5H-1 and UNC5H-2 (see AAW78901) are human homologues of Caenorhabditis elegans UNC-5 protein. Their amino acid sequences were deduced from solutions to the cones (see AAV52941 and AAV52943) isolated from an embryonic brain cDNA library. The predicted proteins show similarity with UNC-5, possess 2 predicted membrane spanning region, and a large intracellular domain. They are predicted to be involved in cell migration and axon guidance, and are predicted to be involved in cell migration certains. Rat UNC5H-1 (see AAW78998) and UNC5H-2 (see AAW78900) proteins centains. Rat UNC5H-1 (see AAW78998) and UNC5H-2 (see AAW78900) proteins are also claimed. Vertebrate UNC-5 proteins may be produced recombinantly comparisation probes and primers, vertebrate UNC-5-specific binding subject compositions in diagnosis, (e.g. genetic hybridisation screens for vertebrate unc-5 gene expression) and in the biopharmaceutical industry compositions conserved the compositions of the composition and in the biopharmaceutical industry compositions conserved the compositions of the composition and in the biopharmaceutical industry compositions conserved the compositions of the composition and in the biopharmaceutical industry compositions conserved the compositions cons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ovieening chemical libraries for lead pharmacological agents, reagents for (Updated on 25-MAR-2003 to correct PI field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CVAWSSSGTTKSQKAYIRIARLRKNFEQEPLAKEVSLEQGIVLPCRPPEGIPPAEVEWLR 185
                                                                           The present invention describes 3 variants of human unc-5C cDNAs (unc-5Cb, unc-5Cc and unc-5C8) which correspond to alternatively spliced unc-5Cb, ranscripts, and a human unc-1813 cDNA which shares howology with the Rattus norvegicus unc-5H31 cDNA. Also described are assays based on protein-protein-interactions between the unc-5 protein and a variety of different interacting proteins. The unc-5C variant cDNAs and unc-5H31 cDNA are useful in methods for identifying compounds which reduce or inhibit the lethal phenotype associated with the expression of the unc-5 death domain in yeast. They are also useful in yeast two hybrid death domain in yeast. They are also useful in yeast two hybrid that interact with the human unc-5C protein. AAC90914 to AAC90971 and AAB50646 to AAB50693 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                              65
                                                                                                                                                                                                                                                                                                                                                                                                                                             83

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for identifying a compound composition, a cuttivity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating
                                                              825
                                                                                            857
                                                                                                                            882
                                                                                                                                              New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   305
pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (CMI), chronic constriction injury (CMI) and spared nerve injury (SMI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: Specification, but was obtained in electronic form directly from WIPO at

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed correct corr

The invention discloses a composition comprising two or more isolated rat or human polynuclectides or a polynuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a comprising the vector of the identifying a nucleotide sequence that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal composition of the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more continued that the sequence presented for identifying a compound useful in treating conductates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: the sequence data for this patent did not form directly from WIPO at the print of the pri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  113

The invention describes an isolated polypeptide (I), useful in the manufacture of a medicament for treating a syndrome associated with a human disease. (I), the polynucleotide encoding it (II) and an antibody (III) to (I) are useful for treating or preventing cancer, metabolic disorders, skin disorders, infectious disease, anorexia, behavioral disorders, anxiety disorders, bendocrine disorders, heart and blood disorders, anxiety disorders, practices, inflammatory disorders, neurodegenerative disorder, Alzheimer's disease, Parkinson's disorder, immune disorders, heamatopoletic disorders, and the various dyslipidaemias, metabolic disturbances associated with obsorie, and the metabolic syndrome X and wasting disorders associated with chronic diseases. (I), (II) or (III) are useful in screening assays, detection assays (e.g., chromosomal mapping, tissue typing, forensic biology), predictive medicine (e.g., diagnostic assays and prognostic assays), in methods of treatment (e.g., therapeutic and prophylactic). (I) is creen for not not and in the antibodies immunospecific for (I), to creen for not not and in the antibodies immunospecific for (I), to

(II) is useful in gene therapy, to express (I), to detect (I) mRNA or a genetic lesion in a gene, and to modulate activity of (I). A cell containing a vector exressing (I) is useful for producing non-human transgenic animals. The is the amino acid sequence of a novel human polypeptide described in t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated polypeptide, designated NOVX, useful for treating opreventing cancer, diabetes, obesity, dyslipidemia, anorexia, and metabolic, neurodegenerative, immune and hematopoietic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes an isolated polypeptide (I), useful
       disorder;

clegans UNC-5 protein. Their amino acid sequences were deduced from isolated unc5h cones (see AAV52940 and AAV52942) isolated from an isolated unc5h cones (see AAV52940 and AAV52942) isolated from an isolated unc5h cones (see AAV52940 and AAV52942) isolated from an isolated unc5h cones (see AAV52940 and AAV52942) isolated from an cone isolated cone is the cone isolated in the cone isolated isolated from the cone isolated isolated in the cone predicted isolated isolated in the cone isolated isolated isolated isolated in the cone isolated 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    70

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 8, 3
